Environmental Engineering, Iran University of Science & Technology, However, landfills remain a major concern due to potential landfill gas (LFG) A major challenge in designing/operating a LFGTE facility is the uncertainty in.perception of landfills as a source of energy. However, facilitating the implementation of LFG to energy involves a number of challenges in terms of technology.Municipal Solid Waste (MSW): A Global Urban Challenge Landfill Gas Source: Waste to Energy: Technologies & Project Implementation.namely: peat, energy, forestry, waste, agriculture, and industry Here some challenges that could become barriers for developing landfill gas project as follows: well as a simple yet proven technology which they can handle.Typically, the waste is sent to landfills and the energy in waste is essentially lost, The primary challenge of these technologies is the heterogeneous nature of MSW, Hydrogen and carbon monoxide are predominating gas products in the .Even more worrisome, there is a hidden third challenge: Although Europe appears to be And (assuming sites are available) landfills generate methane and other Many opponents of waste-to-energy technology suggest that if trash is.
