Chapter 1. Necessity of a Compliance Program

I. INTRODUCTION--GENERALLY

In-house occupational safety and health compliance programs serve two major functions: (1) providing clear evidence of an enterprise's commitment to obeying the law, while (2) identifying hazards in time to reduce costs and potential liability.

Corporate compliance in the 21st century requires pulling together scientific information and a staff that has a variety of talents, in order to obey an ever-growing cluster of laws that center around the societal need to protect occupational safety and health. The Occupational Safety and Health Act of 1970 (OSH Act)³ is one of the most important statutes found in federal, state and international law protecting people at work—but it is only one of the laws that create a web of employer obligations to fashion and demonstrate the validity of health and safety protections in their workplace.

The philosophy that work-related illnesses are an avoidable aspect of industrialization is a fundamental tenet of all. OSH Act emphasizes each employer's responsibility to recognize, correct and reduce potential hazards. Strong penalties await employers whose enterprises produce preventable harms. Although occupational safety and health laws, and OSH Act is no exception. OSH Act Section 5, the "General Duties," clause requires employers to provide "employment and places of employment that are free of recognized hazards." Case law states that this term includes a wide variety of potential harmno specific equation will predict how many dollars invested in occupational safety and health compliance programs will result in specific dollars saved, effective programs have many benefits.

In-house occupational health and safety compliance systems can:

- (1) Avoid potential tort liability;
- (2) Reduce lost productivity and down time;
- (3) Avoid Occupational Safety and Health Administration (OSHA) fines and penalties;
- (4) Prevent injury, illness and disease;
- (5) Coordinate compliance for environmental protection statutes;
- (6) Provide support for compliance with Americans With Disabilities Act (ADA) and its attendant obligations to protect asymptomatic individuals under the Genetic Information Non Discrimination Act ("GINA");
- (7) Work with government agencies for emergency preparedness and Homeland Security;
- (8) Reduce workers compensation costs;
- (9) Reduce employer-based health insurance costs through targeted health promotion consistent with the requirements of the Patient Protection Affordable Care Act of 2010 (PPACA)⁴; and

³Occupational Safety and Health Act (OSH Act), 29 U.S.C.A. §§651 et seq. Please note that people often confuse "OSHA", the Occupational Safety and Health Administration, with "OSH Act" which is the actual law.

⁴The PPACA is commonly called in the press "Obamacare" but it is the Patient Protection Affordable Care Act
